Sig	nature of Invigilators	Roll No.			
1.		(In figures as in Admit Card)			
2.	JY-06/02	Roll No			
		(in words)			
Nar	ne of the Areas/Section (if any)				
Tìı	me Allowed :75 Minutes]	[Maximum Marks : 100			
Ins	tructions for the Candidates				
1.	Write your Roll Number in the space provided on the top	of this page.			
2.	This paper consists of fifty (50) multiple choice type que	estions. All questions are compulsory.			
3.	The answer should be				
	Control mounts	OR A			
4.	Your responses to the items for this paper are to be indionly.	cated on the ICR Answer Sheet under Paper II			
5.	Read instructions given inside carefully.				
6.	Extra sheet is attached at the end of the booklet for rough				
7.	You should return the test booklet to the invigilator at the with you outside the examination hall.	e end of paper and should not carry any paper

.

PHYSICAL SCIENCE Paper - II

NOTE: This paper contains FIFTY (50) multiple-choice / Assertion & Reasoning / Matching questions, each questions carrying two (02) marks. Attempt ALL the questions.

1. Which of the following does not satisfy the wave equation?

(A) $50 \exp [i(\omega t - \beta z)]$

(B) $\sin \omega (10z + 5t)$

(C) $(x + 2t)^2$

(D) $\cos (5y + 2x)$

2. What is the value of $\iiint \vec{\nabla} \cdot \vec{F} \, dx \, dy \, dz \text{ over the region } x^2 + y^2 + z^2 \le 16,$ where $F = (x^2 + y^2 + z^2) (x\hat{i} + y\hat{j} + z\hat{k})$

(A) 4π

(B) $4^{3}\pi$

(C) $4^6\pi$

(D) zero

3. The Lgrangian of a particle of mass M moving in a plane is given by $L = \frac{1}{2}M\left[v_x^2 + v_y^2\right] + a\left[xv_y - yv_x\right] \text{ where } v_x \text{ and } v_y \text{ are velocity components and 'a'}$ is a constant. The canonical movement of the particle are given by

(A) $p_x = Mv_x$ and $p_v = Mv_v$

(B) $p_x = Mv_x + ay \text{ and } p_y = Mv_y + ax$

(C) $p_x = Mv_x - ay$ and $p_y = Mv_y + ax$

(D) $p_x = Mv_x - ay$ and $p_y = Mv_y - ax$

- 4. Given a wave with the dispersion relation $\omega = ck + m$ for k > 0 and m > 0, which one of the following is true?
 - (A) The group velocity is greater than the phase velocity
 - (B) The group velocity is less than the phase velocity
 - (C) The group velocity and the phase velocity are equal
 - (D) There is no definite relation between the group velocity and the phase velocity.

Which one of the following remains invariant under Lorentz transformation? 5.

(A)
$$\frac{\partial}{\partial x} + \frac{\partial}{\partial y} + \frac{\partial}{\partial z} - \frac{1}{c^2} \frac{\partial}{\partial t}$$

(A)
$$\frac{\partial}{\partial x} + \frac{\partial}{\partial y} + \frac{\partial}{\partial z} - \frac{1}{c^2} \frac{\partial}{\partial t}$$
 (B) $\frac{\partial^2}{\partial x^2} + \frac{\partial^2}{\partial y^2} + \frac{\partial^2}{\partial z^2} + \frac{1}{c^2} \frac{\partial^2}{\partial t^2}$

(C)
$$\frac{\partial^2}{\partial x^2} + \frac{\partial^2}{\partial y^2} + \frac{\partial^2}{\partial z^2} - \frac{1}{c^2} \frac{\partial^2}{\partial t^2}$$
 (D) $\frac{\partial^2}{\partial x^2} + \frac{\partial^2}{\partial y^2} + \frac{\partial^2}{\partial z^2}$.

(D)
$$\frac{\partial^2}{\partial x^2} + \frac{\partial^2}{\partial y^2} + \frac{\partial^2}{\partial z^2}$$

- The Lagrangian of a particle moving in a plane under the influence of a central 6. potential is given by $L = \frac{1}{2} m \left(\dot{r}^2 + r^2 \dot{\theta}^2\right) - V(r)$. The generalised momenta corresponding to r and θ are given by
 - (A) $m\dot{r}$ and $mr^2\dot{\theta}$

 $m\dot{r}$ and $mr \theta$

 $m\dot{r}^2$ and $mr^2\dot{\theta}$ (C)

- $m\dot{r}^2$ and $mr^2\dot{\theta}^2$ (D)
- The Hamiltonian corresponding to the Lagrangian $L = a\dot{x}^2 + b\dot{y}^2 = -kxy$ is 7.

(A)
$$\frac{p_x^2}{2a} + \frac{p_y^2}{2b} + kxy$$

(B)
$$\frac{p_x^2}{4a} + \frac{p_y^2}{4b} - kxy$$

(C)
$$\frac{p_x^2}{4a} + \frac{p_y^2}{4b} + kxy$$

(D)
$$\frac{p_x^2 + p_y^2}{4ab} + kxy$$

- The value of the Poisson bracket $[\bar{a}.\bar{r},\bar{b}.\bar{p}]$, where \bar{a} and \bar{b} are constant vectors, is
 - (A) āб

 $\vec{a} - \vec{b}$

(C) $\bar{a} + b$

- (D)
- The homogeneity of time leads to the law of conservation of 9.
 - (A) Linear momentum

Angular momentum **(B)**

(C) Energy

- (D) Parity
- 10. A sphere of radius R carries charge density proportional to the distance from the center, $\rho = Ar$ where A is a positive constant. At a distance of $\frac{R}{2}$ from the center the magnitude of the electric field is
 - $A/4\pi \in$ (A)

AR/€ **(B)**

(C) $AR^2/16 \in$

(D) $AR^3/4\pi \in$

- 11. Steady current I flows down a uniform circular wire of length L, radius R and resistivity ρ , V is the applied voltage. The pointing vector at the surface of the wire is
 - (A) zero
 - (B) pointing along wire with magnitude $\frac{VI}{\pi r^2}$
 - (C) pointing inward at the surface with the magnitude $\frac{VI}{2\pi RL}$
 - (D) pointing inside the wire at the surface with the magnitude $\frac{\rho L}{\pi R^2}$
- 12. Infinite x y plane is a non-conducting surface, with the surface charge density σ as measured by an observer at rest on the surface. A second observer moves with a velocity $v\hat{x}$ relative to the surfae at a height h above it, which of the following expressions gives the electric field measured by the second observer?
 - (A) $\sigma/2 \in_{\mathfrak{o}} \hat{z}$

(B) $\frac{\sigma}{2 \epsilon_s} \sqrt{1 - v^2/c^2} \hat{z}$

(C) $\frac{\sigma}{2 \in_{\mathfrak{o}}} \frac{1}{\sqrt{1 - v^2/c^2}} \hat{z}$

- (D) $\frac{\sigma}{2 \in_{o}} \left(\sqrt{1 v^2/c^2} \ \hat{z} + \frac{v}{c} \hat{x} \right)$
- 13. The electric field in an electro-magnetic wave is described by the relation $\vec{E}\left(\vec{r},t\right) = \left(\vec{\epsilon}_{1} \ E_{1} + \vec{\epsilon}_{2} \ E_{2}\right) e^{i\left(\vec{k}\cdot\vec{r}-wt\right)} \text{ where } \vec{\epsilon}_{1} \text{ and } \vec{\epsilon}_{2} \text{ are two mutually orthogonal unit ectors, both are perpendicular to vector } \vec{k} \text{ and } E_{1} \text{ and } E_{2} \text{ are two numbers. If } E_{2} = iE_{1} \text{ (where } i = \sqrt{-1}\text{), then the electro-magnetic wave is$
 - (A) plane polarized

(B) circularly polarized

(C) partially polarized

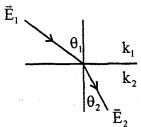

- (D) elliptically polarized
- 14. A charged particle is released from rest in a region where there is a constant electric field and a consant magnetic field. If the two fields are parallel to each other, the path of the particle is
 - (A) Helix

(B) Parabola

(C) Straight line

(D) Cycloid

15. For electrostatic fields \vec{E}_1 and \vec{E}_2 shown at the interface between two dielectrics with dielectric constants k_1 and k_2 , the angles θ_1 and θ_2 are related by

- (A) $k_1 \tan \theta_1 = k_2 \tan \theta_2$
- (B) $k_1 \sin \theta_1 = k_2 \sin \theta_2$
- (C) $k_1 \cot \theta_1 = k_2 \cot \theta_2$
- (D) $k_1 \cos \theta_1 = k_2 \cos \theta_2$
- 16. Listed below are Maxwell's equations of electromagnetism. If the magnetic poles exist, which of the equations would need notifications?
 - (i) curl $\vec{H} = \vec{J} + \frac{\partial \vec{D}}{\partial t}$

(ii) $\operatorname{curl} \vec{E} = -\frac{\partial \vec{B}}{\partial t}$

(iii) $\operatorname{div} \ \vec{D} = \rho$

(vi) div $\vec{B} = 0$

(A) iv only

(B) (i) & (ii)

(C) (ii) & (iv)

- (D) (iii) & (iv)
- 17. If the matrices σ_x, σ_y and σ_z have their usual meaning, the value of $[\sigma_x, \sigma_y]$ is
 - (A) iσ,

(B) $2i\sigma_z$

(C) σ_z

(D) $2\sigma_{\tau}$

- 18. The value of $[L_z, y]$ is
 - (A) -i $\hbar x$

(B) i $\hbar x$

(C) $-i\hbar L_x$

- (D) $i \hbar L_x$
- 19. The explicit expression for the operator $\left(x\frac{d}{dx}\right)^2$ is
 - (A) $x^2 \frac{d^2}{dx^2} + 3x \frac{d}{dx} + 1$

(B) $x^2 \frac{d^2}{dx^2}$

(C) $\frac{d}{dx}x^2 + 1$

(D) $x^2 \frac{d^2}{dx^2} + x \frac{d}{dx}$

20.	A particle of mass m is represented by a wave equation $\psi(x) = Ae^{ikx}$ where k				
	wave vector and A is a constant.	The magnitude of prol	bability curr	ent density	
	of the particle is			* - *	

(A)
$$\frac{\hbar k}{m} |A|^2$$

(B)
$$|A|^2 \frac{\hbar k}{2m}$$

(C)
$$|A|^2 \frac{(\hbar k)^2}{m}$$

(D)
$$\frac{(\hbar k)^2}{2m}$$

wavefunction of certain particle is normalised 21. The $\psi = A\cos x \text{ for } -\frac{\pi}{2} \le x \le \frac{\pi}{2}$, then the value of A is

(A)
$$\sqrt{\frac{3}{8\pi}}$$

(B)
$$\sqrt{\frac{2}{\pi}}$$

(C)
$$\sqrt{\frac{\pi}{2}}$$

(D)
$$\sqrt{\frac{8\pi}{3}}$$

22. The ground state wave function of the harmonic oscillator is

(A)
$$\psi_o(x) = \left(\frac{m\omega}{\hbar\pi}\right)^{\frac{1}{4}} \exp\left[-\frac{m\omega x^2}{2\hbar}\right]$$
 (B) $\psi_o(x) = \left(\frac{\pi\hbar}{m\omega}\right)^{\frac{1}{4}} \exp\left[-\frac{m\omega x^2}{2\hbar}\right]$

B)
$$\psi_o(x) = \left(\frac{\pi\hbar}{m\omega}\right)^{1/4} \exp\left[-\frac{m\omega x^2}{2\hbar}\right]$$

(C)
$$\psi_o(x) = \left(\frac{m\omega}{\pi\hbar}\right)^{\frac{1}{2}} \exp\left[-\frac{m^2\omega^2x^2}{2\hbar^2}\right]$$
 (D) $\psi_o(x) = \left(\frac{\pi\hbar}{m\omega}\right)^{\frac{1}{2}} \exp\left[-\frac{m^2\omega^2x^2}{2\hbar^2}\right]$

23. One dimensional hormonic oscillator in state $\psi(x) = \frac{1}{\sqrt{2a}} \left[4\psi_o(x) - 3\psi_1(x) + 2\psi_2(x) \right]$ where $\psi_o(x)$, $\psi_1(x)$ and $\psi_2(x)$ are ground, first excited and second excited states respectively. The probability of finding the oscillator in the first excited state is

(B)
$$\frac{9}{29}$$

(C)
$$3/\sqrt{29}$$

(D)
$$16/\sqrt{29}$$

24.	A harmonic oscillator is perturbed by a perturbation potential αx^3 . The ground state energy of the oscillator to a first order in perturbation is						
	(A)	$\frac{1}{2}\hbar\omega$	(B)	$\frac{1}{2}\hbar\omega + \alpha$			
	(C)	$\frac{3}{2}\hbar\omega + \alpha$	(D)	$(n+\frac{1}{2})\hbar\omega$ where n is odd.			
25.	For a rigid sphere of radius 'a' the quantum mechanical scattering cross section is given by						
	_	$3\pi a^2$	(B)	πa^2			
		$4\pi a^2$		$2\pi a^2$			
26.	The three dimensional wave function $: \psi(\vec{r})$						
	(A)	has dimension of energy · time	(B)	has dimension of (length)-3/2			
	(C)	is a dimensionless quantity	(D)	has dimension of energy			
27.	The l	Fermi Golden rule expresses					
	(A)	probable transition rate		density of states			
	(C)	probability per unit volume	(D)	transition matrix element			
28.	3. Given a thermodynamic system at pressure P in volume V at temperature the Helmholtz free energy is given by						
*		F = U + PV	(B)	F = U - TS			
	` '	F = U + PV + TS	(D)	F = U - PV + TS			
	where S is entropy and U is internal energy.						
29.	In a	throttling process,					
		enthalpy remains constant	(B)	Free energy remains constant			
	(C)	Gibb's energy remains constant	(D)	Internal energy remains fixed.			
30.	There are N Fermi particles with energies $\epsilon_0, \epsilon_1, \epsilon_2, \ldots, \epsilon_{N-1}$. At absolute zero, they are distributed as						
	(A)	one particle in each energy level	1	•			
	(B)	two particles in each energy leve		Control of the Control			
	(C) all particles in ϵ_0						
	(D)	half particle in ∈o and remaining	ng hali	fin ∈₁

45 .	Velocity of light is related to electric permittivity	€,	and magnetic permeability
	μ_0 by the relation	•	•

(A)
$$c = (\mu_0 \in_{\mathfrak{o}})^{-1}$$

(B)
$$c = (\mu_0 / \epsilon_o)$$

(C)
$$c = (\epsilon_0 / \mu_0)^{-1/2}$$

(D)
$$c = (\epsilon_0 / \mu_0)^{1/2}$$

46. Relation between pumping speed S throughput Q and pressure P is given by

(A)
$$Q = S/P$$

(B)
$$Q = P/S$$

(C)
$$Q = PS$$

(D)
$$Q = e^{P/S}$$

47. In a linear regression analysis data are fitted with equation Y = mx + c and results yield slope, intercept and regression co-efficient 'r'. The fit is good if 'r' is

(A) 1.0

(B) 0.5

(C) 0.3

(D) 0.7

48. A 10-bit A/D converter has a full scale range of 10V. The percentage resolution is

(A) 10

(B) 1.0

(C) 0.1

(D) 0.01

49. To attain temperature less than 4K, one utilizes

- (A) Newton's law of cooling
- (B) Joule Thomson Effect
- (C) Adiabatic demagnetization
- (D) Peltier cooling

50. If the results are expressed as $\bar{x} \pm 3\sigma$, where \bar{x} = mean value and σ is the standard deviation, it means that

- (A) approximately 99% of the readings will lie between $\pm 3\sigma$
- (B) 66% of the readings will lie between $\pm 3\sigma$
- (C) 33% of the readings will lie between $\pm 3\sigma$
- (D) non of the readings will lie between $\pm 3\sigma$

ROUGH WORK
